## **APPROACH & METHODOLOGY**

### **Valuation Bases**

Valuation base means the indication of the type of value being used in an engagement. Different Valuation bases may lead to different conclusions of value.

The Valuation bases used for the Report is 'Relative Value' as per IVS 103 issued by ICAI RVO. In transactions of the nature of merger or amalgamation of companies or merger or demerger of businesses, the consideration is often discharged primarily by issue of securities in the nature equity of the acquirer or transferee entity with references to an exchange ratio or entitlement ratio, considering the relative values. Such relative values are generally arrived at by applying an appropriate valuation approach or a combination of valuation approaches.

### **Premise of Value**

Premise of value refers to the conditions and circumstances how an asset is deployed. Considering the nature of this exercise, we have adopted 'Going Concern' Value as the premise of value.

It should be understood that the valuation of any company or its assets is inherently imprecise and is subject to certain uncertainties and contingencies, all of which are difficult to predict and are beyond our control.

The three main valuation approaches are the asset approach, income approach and market approach. There are several commonly used and accepted methods within the asset approach, income approach and market approach, for determining the relative fair value of equity shares, such as:

1. Asset Approach - Net Asset Value method
2. Income Approach - Discounted Cash Flows method
3. Market Approach
  - a. Market Price method
  - b. Comparable Companies Quoted Multiples method ('CCM')
  - c. Comparable Transaction Multiples method ('CTM')

### **Asset Approach - Net Asset Value (NAV) Methodology**

The asset base valuation technique is based on the value of underlying net assets of the business, either on a book value basis or realizable value basis or replacement cost basis. This valuation approach is mainly used in case where the firm is to be liquidated that is, it does not meet 'going concern' criteria or in case where the assets base dominates earning capability.

### **Income Approach - Discounted Cash Flows ('DCF') Method**

Income approach is a valuation approach that converts maintainable or future amounts (e.g. cash flows or income and expenses) to a single current (i.e. discounted or capitalized) amount. The fair value measurement is determined on the basis of the value indicated by current market expectations about those future amounts.

Using the DCF analysis involves determining the following:

- ***Estimating future free cash flows:***

Free cash flows are the cash flows expected to be generated by the company that are available to all providers of the company's capital – both debt and equity.

- ***Appropriate discount rate to be applied to cash flows i.e. the cost of capital:***

This discount rate, which is applied to the free cash flows, should reflect the opportunity cost to all the capital providers (namely shareholders and creditors), weighted by their relative contribution to the total capital of the company. The opportunity cost to the capital provider equals the rate of return the capital provider expects to earn on other investments of equivalent risk.

### **Market Approach**

Market approach is a valuation approach that uses prices and other relevant information generated by market transactions involving identical or comparable (i.e. similar) assets, liabilities or a group of assets and liabilities, such as a business.

#### **Market Price ('MP') Method**

The market price of an equity shares as quoted on a stock exchange is normally considered as the value of the equity shares of that company where such quotations are arising from the shares being regularly and freely traded in, subject to the element of speculative support that may be inbuilt in the value of the shares. But there could be situations where the value of the share as quoted on the stock market would not be regarded as a proper index of the fair value of the share especially where the market values are fluctuating in a volatile capital market. Further, where there is a question of evaluating the shares of one company against those of another, the volume of transactions and the number of shares available for trading on the stock exchange over a reasonable period would have to be of a comparable standard.

#### **Comparable Companies' Quoted Multiple ('CCM')**

Under CCM, value of the equity shares of a company is arrived at by using multiples derived from valuations of comparable companies, as manifest through stock market valuations of listed companies. This valuation is based on the principle that market valuations, taking place between informed buyers and informed sellers incorporate all factors relevant to valuation. Further, relevant multiples need to be chosen carefully and adjusted for differences between the circumstances.

### **Comparable Companies' Transaction Multiple ('CTM')**

Under this method, value of the equity shares of a company/ business is arrived at by using multiple derived from valuation in comparable companies as manifest through transaction valuations. Relevant multiples need to be chosen carefully and adjusted for differences between the circumstances.

This valuation arrived at under the abovementioned methods could fluctuate with lapse of time, changes in prevailing market conditions and prospects, industry performance and general business and economic condition, financial and otherwise, of businesses/ companies, and other factors which generally influence the valuation of companies and their assets.

In the current case, on the basis of proposed capital structure of SGL 5 and considering the fact that shareholders of SPTL would be ultimate beneficial holders in SGL 5, there is no valuation exercise being undertaken and Share Entitlement Ratio is determined based on the intended capital structure of SGL 5. Kindly refer to below paras for further details.

### **SHARE ENTITLEMENT RATIO**

Here, the Management proposes demerger of Infrastructure Business Undertaking of SPTL into SGL 5. The effect of demerger is that each shareholder of SPTL becomes owner of shares in two companies i.e. SPTL and SGL 5, instead of one i.e. SPTL. The Scheme does not envisage the dilution of the holding of any one or more shareholders as a result of the demerger.

Considering the above, any entitlement ratio can be considered for the above demerger, as the proportionate shareholding of any shareholder would not change.

We understand that,

- In consideration for the demerger of Demerged Undertaking, the Management proposes to issue 1 (One) equity share of SGL 5 (of INR 2/- each fully paid up) for 1 (one) equity share of SPTL (of INR 2/- each fully paid up), to the shareholders of SPTL. Once the Scheme is implemented, the existing shares of SGL 5 held by SPTL would be cancelled and the shareholding in SGL 5 would mirror the shareholding of SPTL.

The proposed demerger of Infrastructure Business Undertaking from SPTL into SGL 5 shall entail entitlement of equity shares of SGL 5 to all the equity shareholders of SPTL on a proportionate basis.

In the current instance, the issue of adjusting equity values between different shareholders that usually forms the prime consideration for determining fair entitlement ratio is not relevant and hence no valuation has been carried out.

Based on the aforementioned, and considering that all the shareholders of SPTL shall, upon demerger, be the ultimate beneficial economic owners of SGL 5 and that upon allotment of equity shares by SGL 5, in the proposed Share Entitlement Ratio, the shareholding pattern of the SGL 5 will be the same as that of SPTL and hence their economic ownership will remain unchanged, the proposed Share Entitlement Ratio of **1 (one)** equity share of SGL 5 of INR 2/- each fully paid up for every **1 (one)** equity share of the SPTL of INR 2/- each fully paid up for the demerger of Infrastructure Business Undertaking is fair.

Our Report and Share Entitlement Ratio is based on the envisaged equity share capital structure of SGL 5. Any material variation in the equity capital structures of Specified Companies apart from the abovementioned Scheme may impact the Share Entitlement Ratio.
